Pathophysiology and general pathology

## 1. COURSE OBJECTIVES

- 1.1 The **aim** of the course of histology, embryology, and cytology in higher medical schools is to master the knowledge of the microscopic functional morphology and development of the cellular, tissue and organ systems of the human body. It provides the basis for studying clinical disciplines and contributes to the formation of medical thinking.
- The **objectives** of mastering the discipline "Histology, embryology, cytology" are:
- to study general and specific structural and functional properties of body cells and tissues and their patterns of embryonic and post-embryonic development;
  - to study the histo-functional characteristics of main body systems, patterns of their embryonic development, as well as functional, age-related and protective-adaptive changes in organs and their structural elements;
  - to form students' skills in microscopic examination of histological specimens.

## 2. COURSE OVERVIEW

**Course code (in curriculum)** | **B1.O.04**

### 2.1 Assumed background:

Human anatomy

Biology

Latin

Chemistry

Human anatomy

### 2.2 Post requisites:

Immunology

Pathologic Anatomy

Clinical Pathologic Anatomy

Dermatovenereology

Neurology, Medical Genetics, Neurosurgery

Otorhinolaryngology

Ophthalmology

Obstetrics and Gynecology

Pediatrics

Hospital Therapy, Endocrinology

Dentistry

Oncology, X-Ray Therapy

Traumatology and Orthopedics

Clinical Anatomy

Clinical cytology and biochemistry

## 3. COMPETENCES UPON COMPLETION OF THE COURSE (MODULE)

**GPC-5.1** Demonstrates knowledge and understanding in the sections of fundamental medicine - anatomical, histological structures (anatomy of the human body, tissue structure of organs and their microscopic differentiation), physiological processes (human physiology, mechanisms of regulation of homeostasis, functional systems of the body in norm

**GPC-5.2** Demonstrates knowledge of cell structure, phases of cell division, theoretical foundations of genetics, understanding of the biology of insects and helminths, their role in the etiology of human diseases

**GPC-5.6.** Demonstrates knowledge and skills to identify: the structure of the human body, morphological macro- and microscopic parameters in pathology; diagnose criteria of general pathological pathophysiological processes in various nosologies; on the basis of which he/she possesses skills in topographic anatomy and is able to solve questions of operative surgery

**By the end of the course students must:**

### 3.1 know:

safety and operating instructions for work in physical, chemical, biological laboratories with reagents, equipment, animals;

chemical and biological essence of the processes occurring in a living organisms at the molecular, cellular, tissue and organ levels;

the basic development and functioning patterns of the organisms on the basis of structural organization of their cells, tissues and organs;

histo-functional peculiarities of tissue elements and their research methods;

the structure, topography and development of cells, tissues, organs and systems of the organism in correlation with their function, peculiarities of the organismic and population life organization levels;

functional systems of the human body, their regulation and self-regulation when exposed to the external environment;

|            |  |
|------------|--|
|            | the structure and functions of the human immune system, its age-related peculiarities, cellular-molecular development and functioning mechanisms of the immune system, the main stages, types, genetic control of the immune response; |
|            | microscopic structure, functions and sources of cell development;  |
|            | tissue and microscopic structure, functions and sources of organ development;  |
|            | the main stages of embryonic development and their characteristics;  |
|            | critical periods of human embryonic development;   |
|            | age-related peculiarities of tissue and organ structure.   |
| <b>3.2</b> | <b>be able to:</b>   |
|            | use educational, scientific, popular scientific literature and the Internet for professional activity;   |
|            | use physical, chemical and biological equipment;   |
|            | work with magnifying equipment (microscopes, optical and simple lenses);   |
|            | make a histophysiological assessment of the state of various cellular, tissue and organ structures;  |
|            | explain the nature of the deviations in the development pattern which can lead to the variants of abnormalities and malformations;   |
|            | interpret the results of the most common functional diagnostics methods used to detect the pathology of blood, heart and blood vessels, lungs, liver, kidneys and other organs and systems.  |
|            | draw histological and embryological specimens and to designate the structural elements in them;  |
|            | examine histological and embryological specimens with the microscope;  |
|            | analyse histological and embryological specimens;  |
|            | examine electron microphotographs of cells and non-cellular structures;  |
|            | prepare oral and written description of the specimens;   |
|            | apply the knowledge of histology in practice for solving standard problems in the professional activity of a doctor (solving situational tasks).   |

#### 4. STRUCTURE AND CONTENTS OF THE COURSE (MODULE)
